Energy Harvesting: Solar, Wind, and Ocean Energy Conversion Systems (Energy, Power Electronics, and Machines) By Alireza Khaligh, Omer C. Onar

Also called energy scavenging, energy harvesting captures, stores, and uses "clean" energy sources by employing interfaces, storage devices, and other units. Unlike conventional electric power generation systems, renewable energy harvesting does not use fossil fuels and the generation units can be decentralized, thereby significantly reducing transmission and distribution losses. But advanced technical methods must be developed to increase the efficiency of devices in harvesting energy from environmentally friendly, "green" resources and converting them into electrical energy.

Recognizing this need, **Energy Harvesting: Solar, Wind, and Ocean Energy Conversion Systems** describes various energy harvesting technologies, different topologies, and many types of power electronic interfaces for stand-alone utilization or grid connection of energy harvesting applications. Along with providing all the necessary concepts and theoretical background, the authors develop simulation models throughout the text to build a practical understanding of system analysis and modeling.

With a focus on solar energy, the first chapter discusses the I - V characteristics of photovoltaic (PV) systems, PV models and equivalent circuits, sun tracking systems, maximum power point tracking systems, shading effects, and power electronic interfaces for grid-connected and stand-alone PV systems. It also presents sizing criteria for applications and modern solar energy applications, including residential, vehicular, naval, and space applications. The next chapter reviews different types of wind turbines and electrical machines as well as various power electronic interfaces. After explaining the energy generation technologies, optimal operation principles, and possible utilization techniques of ocean tidal energy harvesting, the book explores near- and offshore approaches for harvesting the kinetic and potential energy of ocean waves. It also describes the required absorber, turbine, and generator types, along with the power electronic interfaces for grid connection and commercialized ocean wave energy conversion applications. The final chapter deals with closed, open, and hybrid-

cycle ocean thermal energy conversion systems.

Editorial Review

About the Author

Alireza Khaligh is the director of the Energy Harvesting and Renewable Energies Laboratory (EHREL) at the Electric Power and Power Electronics Center (EPPEC) in the electrical and computer engineering department at the Illinois Institute of Technology.

Omer C. Onar is a doctoral research assistant in the Energy Harvesting and Renewable Energies Laboratory (EHREL) at the Electric Power and Power Electronics Center (EPPEC) in the electrical and computer engineering department at the Illinois Institute of Technology.

Users Review

From reader reviews:

Donna Jennings:

Now a day those who Living in the era just where everything reachable by talk with the internet and the resources included can be true or not demand people to be aware of each data they get. How individuals to be smart in getting any information nowadays? Of course the solution is reading a book. Studying a book can help folks out of this uncertainty Information specifically this Energy Harvesting: Solar, Wind, and Ocean Energy Conversion Systems (Energy, Power Electronics, and Machines) book as this book offers you rich info and knowledge. Of course the info in this book hundred per cent guarantees there is no doubt in it you know.

Billie Duran:

Reading a publication tends to be new life style in this particular era globalization. With studying you can get a lot of information that can give you benefit in your life. With book everyone in this world can share their idea. Guides can also inspire a lot of people. A lot of author can inspire their particular reader with their story or even their experience. Not only the storyline that share in the publications. But also they write about the data about something that you need example of this. How to get the good score toefl, or how to teach children, there are many kinds of book that you can get now. The authors on earth always try to improve their proficiency in writing, they also doing some investigation before they write on their book. One of them is this Energy Harvesting: Solar, Wind, and Ocean Energy Conversion Systems (Energy, Power Electronics, and Machines).

Joseph Alderete:

Spent a free a chance to be fun activity to try and do! A lot of people spent their down time with their family, or all their friends. Usually they accomplishing activity like watching television, going to beach, or picnic in the park. They actually doing same every week. Do you feel it? Do you need to something different to fill

your personal free time/ holiday? Can be reading a book may be option to fill your free time/ holiday. The first thing you will ask may be what kinds of reserve that you should read. If you want to test look for book, may be the book untitled Energy Harvesting: Solar, Wind, and Ocean Energy Conversion Systems (Energy, Power Electronics, and Machines) can be fine book to read. May be it may be best activity to you.

Ruby Guillen:

Playing with family in a very park, coming to see the coastal world or hanging out with close friends is thing that usually you may have done when you have spare time, after that why you don't try thing that really opposite from that. One activity that make you not feeling tired but still relaxing, trilling like on roller coaster you are ride on and with addition associated with. Even you love Energy Harvesting: Solar, Wind, and Ocean Energy Conversion Systems (Energy, Power Electronics, and Machines), you can enjoy both. It is great combination right, you still desire to miss it? What kind of hang-out type is it? Oh seriously its mind hangout fellas. What? Still don't have it, oh come on its named reading friends.
