Nikola Tesla's Earthquake Machine with Tesla's Original Patents plus New Blueprints to Build your own Working Model Now for the first time, the secrets of this machine are available to you...

This new manual presents a new technology. It is based on sonic vibrations which can be produced by a comparatively simple apparatus -- The Tesla Oscillator. In the oscillators or transmitters described in this book, a resonance effect can be observed. Resonance appears to be an ever-expanding, magnifying effect with these transmitters. Very little input energy is required to set the device in motion and build that motion to tremendous levels of usable energy. The principle employed is called "Amplitude Modulated Additive Synthesis" by music industry engineers.

We have included a full chapter on vibration physics to explain what happens.

Excerpt from the New York World - Telegram, July 11, 1935 -- Nikola Tesla revealed that an earthquake which drew police and ambulances to the region of his laboratory at 48 E. Houston St., New York, in 1898, was the result of a little machine he was experimenting with at the time which "you could put in your overcoat pocket."

The bewildered newspapermen pounced upon this as at least one thing they could understand and "the father of modern electricity" told what had happened as follows:

"I was experimenting with vibrations. I had one of my machines going and I wanted to see if I could get it in tune with the vibration of the building. I put it up notch after notch. There was a peculiar cracking sound.

"I asked my assistants where did the sound come from. They did not know. I put the machine up a few more notches. There was a louder cracking sound. I knew I was approaching the vibration of the steel building. I pushed the machine a little higher. "Suddenly all the heavy machinery in the place was flying around. I grabbed a hammer and broke the machine. The building would have been about our ears in another few minutes. Outside in the street there was pandemonium.

"The police and ambulances arrived. I told my assistants to say nothing. We told the police it must have been an earthquake. That's all they ever knew about it."

Some shrewd reporter asked Dr. Tesla at this point what he would need to destroy the Empire State Building and the doctor replied: "Vibration will do anything. It would only be necessary to step up the vibrations of the machine to fit the natural vibration of the building and the building would come crashing down. That's why soldiers break step crossing a bridge."

His early experiments in vibration, he explained, led to his invention of his "earth vibrating" machine.

About the Author

DALE POND Dale Pond is truly a renaissance man with a diversified background in chemistry, physics, mechanical engineering, computers, mathematics, acoustics, hydrodynamics, geometry, music and common law. His vast experience includes technical writing, lecturing, corporate training, business, manufacturing, publishing and authoring scientific and philosophical journals and books.

At the leading edge of new paradigm thinking, he has been able to show that vibration is the principle underlying all things. Vibration is the link between spirit and matter - the magic key for creating new worlds and universes.

As an internationally-renowned lecturer, Dale has presented workshops and seminars at the Swiss Association for Free Energy Conference, the International Keely Conference, Sound and Vibration Conference, International Symposium on New Science, International Forum on New Energy, United States Psychotronics Association Conference, the Alchemy of Sound Conference and many others.

WALTER BAUMGARTNER

Walter has been involved in the design and manufacturing of hydraulic and jet turbines, hovercraft, ozone equipment, electrical motors, generators and transformers.

He was the publisher, editor and technical illustrator of Energy Unlimited, a scientific technology journal. As the founder and president of the Tesla Research Center, he researched and constructed Tesla turbines, gravity generators, Tesla electrical oscillators and current interruptors.

For the last ten years, he has been an independent researcher, consultant and speaker on new energy systems including sonic oscillators and transmitters, rotary electrical generators, implosion motors and prime movers.

INTRODUCTION

This manual presents a new technology. It is based on SONIC VIBRATIONS which can be produced by a comparatively simple apparatus. Although sonic vibrations can be similar in their effects and in their wave mechanics like electro-magnetic oscillations, the writer has good reason to believe that this proposed system is fundamentally different in so far as the MANNER OF PRODUCTION of sonic vibrations is concerned.

There is much sonic equipment available now on the market for different purposes. It all has nothing to do with the system in this manual. In the oscillators or transmitters described in this report, a RESONANCE EFFECT can be observed. Since resonance appears to be an ever expanding, magnifying effect with these transmitters, to the extent that they would self destruct the apparatus if uncontrolled, it can be deduced that there must be a great source of energy available to them. The very opposite is the truth of the matter however - very little input energy is required to set the device in motion and build that motion to tremendous levels of useable energy. The principle employed is called "Amplitude Modulation Additive Synthesis" by the music industry engineers. We have included a full chapter on the vibration physics to explain what happens and how. With a few simple formulas and a few basic concepts the writers propose to show why certain resonance effects concerning this type of apparatus go on ever increasing in amplitude. Many measurements have yet to be performed by qualified and competent engineers in their different fields of expertise to derive a complete understand of the device and its attendant phenomena.

Since this new technology can be applied in so many diverse ways, one would think that it would be of interest to government and large concerns to explore its potential for the defense of the country and for commercial possibilities.

The writers have their own ideas about wave mechanics in general and how waves propagate in a medium like our earth without attenuation. This sonic system can not be compared with our existing electro-magnetic wireless Hertz electrical wave domain systems, because it is, as said before, fundamentally different. Tele-Geo-Dynamic oscillators are NOT some "free energy device" which in some mysterious way collect energy out of the environment. One thing appears to be for sure: our present technology does not make proper

allowances in all its machinery for resonance to occur to its fullest extent. On the contrary, many millions of dollars and man-hours are expended in the effort to reduce and do away with all "undesirable" vibration and oscillations.

Much experimentation has been done with the sonic transmitters by Nikola Tesla from whom some of the basic principles have been taken by the writers and further elaborated on. Many of Tesla's earlier experiments have been repeated and we believe that it is he who deserves the credit for having discovered these very fundamental principles of the device and its functions. Further elaboration has been brought in from John Keely's work with the fundamental principles of vibration physics and from a number of conventional sources dealing with vibration, sound and noise fundamentals. In modern times sound and vibration are being used more and more. The physics of these forces are becoming more known and useable. Sound is a rich source of energies and forces not completely understood and harnessed yet.
